

# **Data Insight Studio**

## **Support:**

Hira Automation Pvt. Ltd, Pune.

## **Guidance:**

Dr. Mahesh Gangarde,  
Department of E&TC,  
SCTR'S PICT Pune-43.

## **Technical Support:**

1. Mr. Nana Gaikwad,  
Founder and Director,  
Hira Automation Pvt. Ltd, Pune-46.
2. Mr. Sudheer Rajpure,  
Senior Design Engineer,  
Hira Automation Pvt. Ltd, Pune-46.

## **Team Members (TE E&TC, SCTR'S PICT):**

Aniket Malpure (32403)

Ganesh Mehta (32441)

Srushti Chandak (32411)

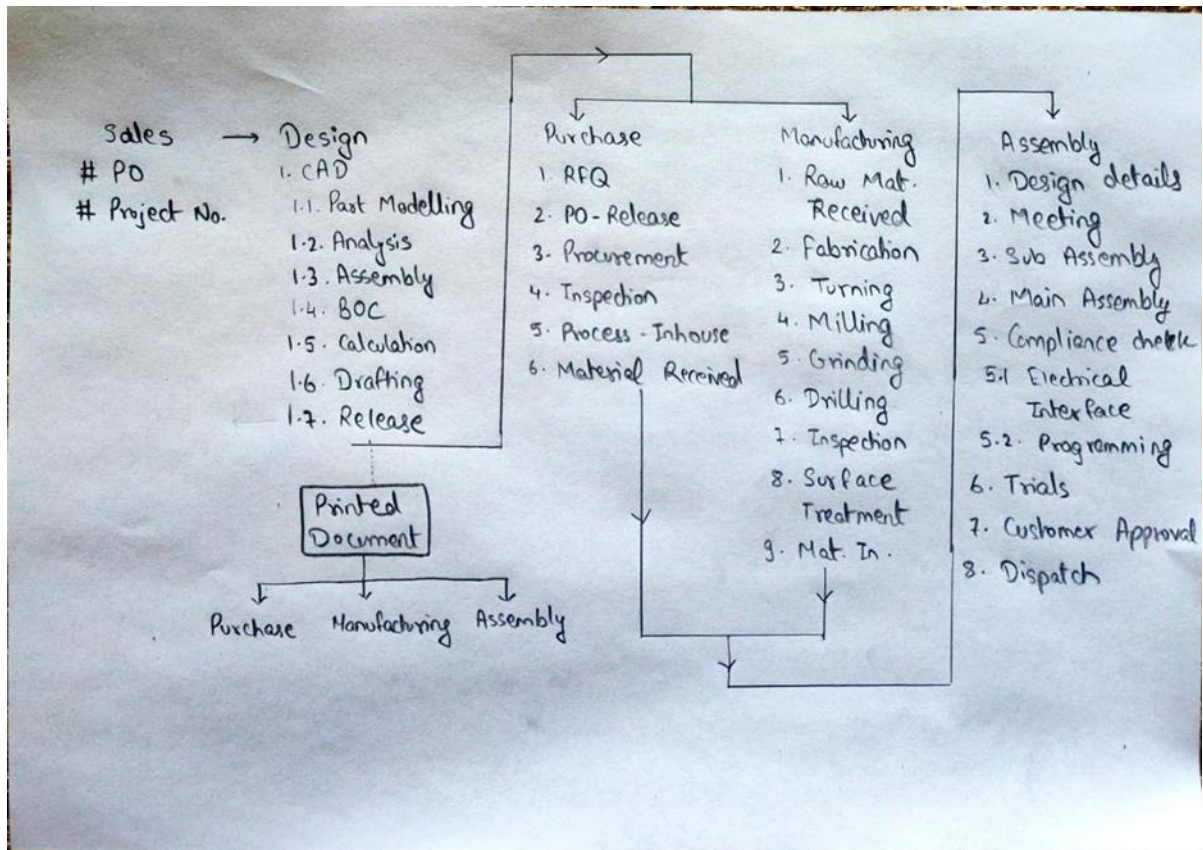

## 1. Aim and Objective:

The aim of the project is *to develop a website which could keep track of the completion of sub-tasks of the given industry project*. Through this project we got to learn various technical as well as non-technical aspects.

Objective:

1. To learn and understand the work flow of an Industry projects.
2. To study technology to implement this concept.
3. To collect data / information from Industry.
4. To analyze and test the project successfully.

## 2. Proposed flowchart (Work Flow):

**Fig. 1 Functional flowchart of proposed system**

Fig. 1 shows the functional flowchart of the working of the website, i.e. tasks assigned when a project is received and is to be monitored.

### 3. Tech Stack :

In *technical domain*, various concepts of web development like development using Html, CSS, Bootstrap for the Frontend and Django with SQLite3 DBMS for Backend. Some libraries like Pandas, NumPy were used to implement the project. File Handling in Python was executed. The website keeps a *live track* of data about *Project Completion*.

### 4. Project Implementation:

In this project we are *constructing* a website which can monitor a project from beginning to the end. It *monitors every task* of an individual *project* received by the company i.e. whether the task of the given project (which is scheduled) is *completed* within the *deadline*. As per the completion of the task, the respective authorized person will get to know the *current status* of the project. It also provides *information* about to *whom* a particular *task* is *assigned* and whether he/she is *completing* his/her task as per *scheduled time* or not.

The project is divided into *five departments*, *starting* from *sales* where the sales manager *initiates* a project. After the sales manager, other four department *managers* will *receive* the project name in the *assign page* where they can *assign* their respective *tasks* to their department *engineers*. After allotment of tasks, each *engineer* will be able to *see* the *task* with a *deadline provided* by the *department manager*. For a Design Engineer, if the task is 'Release', he/she needs to upload the BOC and BOM of the project in CSV format. This CSV file is then read using Pandas and NumPy libraries in Python and displayed to purchase and manufacturing engineers where they can submit the respective sub-task individually.

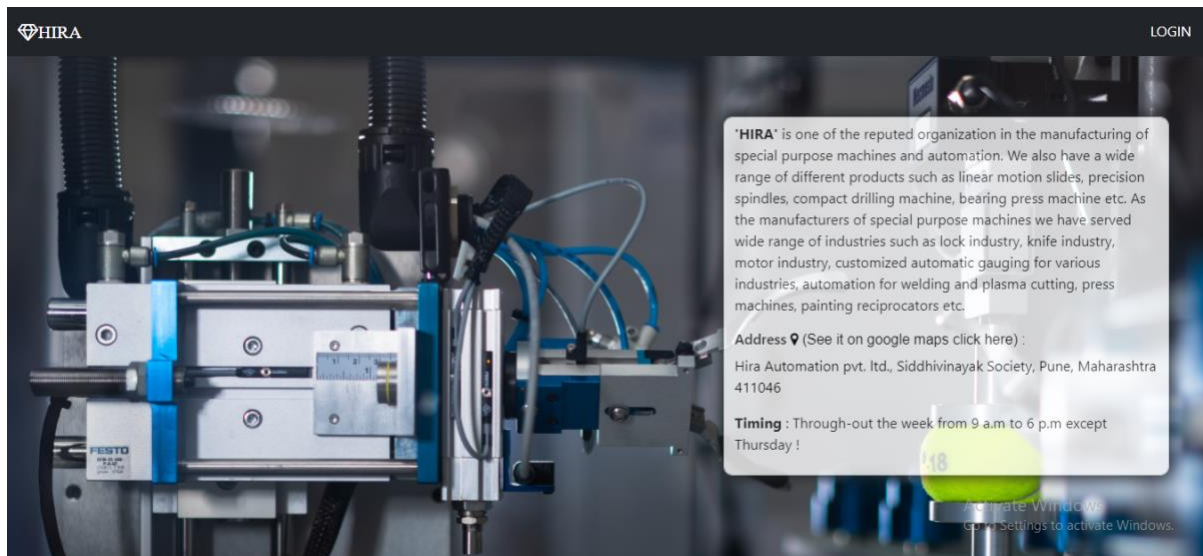

The *customer* will also get to know their *status* of *projects* with their *auto-generated login credentials* (username: project name, password: customer name). The *owner page* will not only *show* the *status* of the *project* (consisting of four departments) but will also display *live tracking* of *each sub activity* going on for the *project*.

## 5. Result and Discussion:

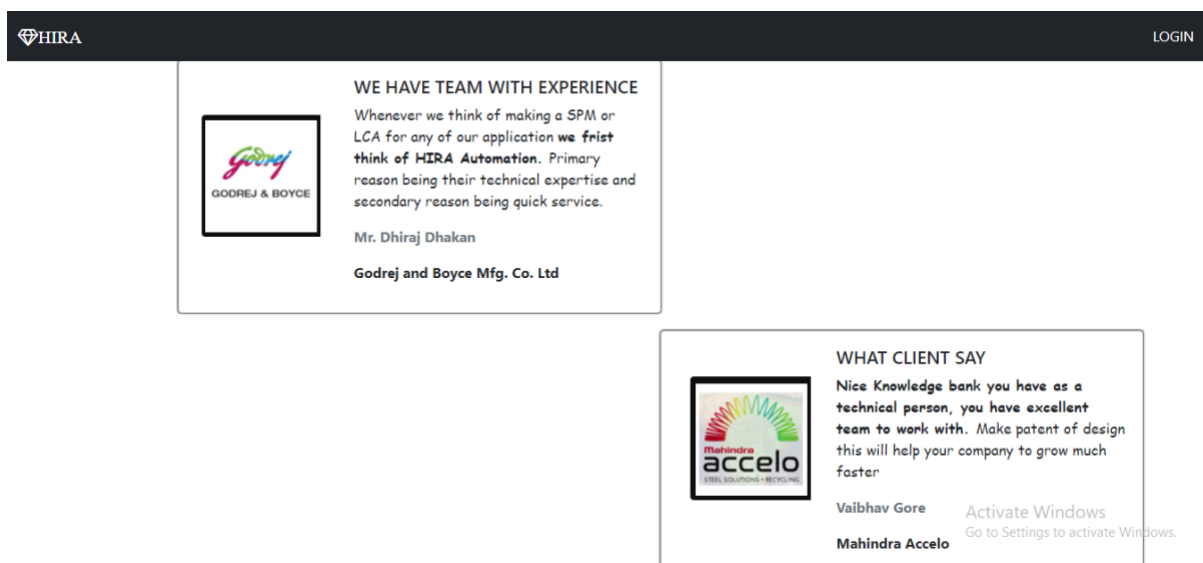

**Fig. 2 Login Page**

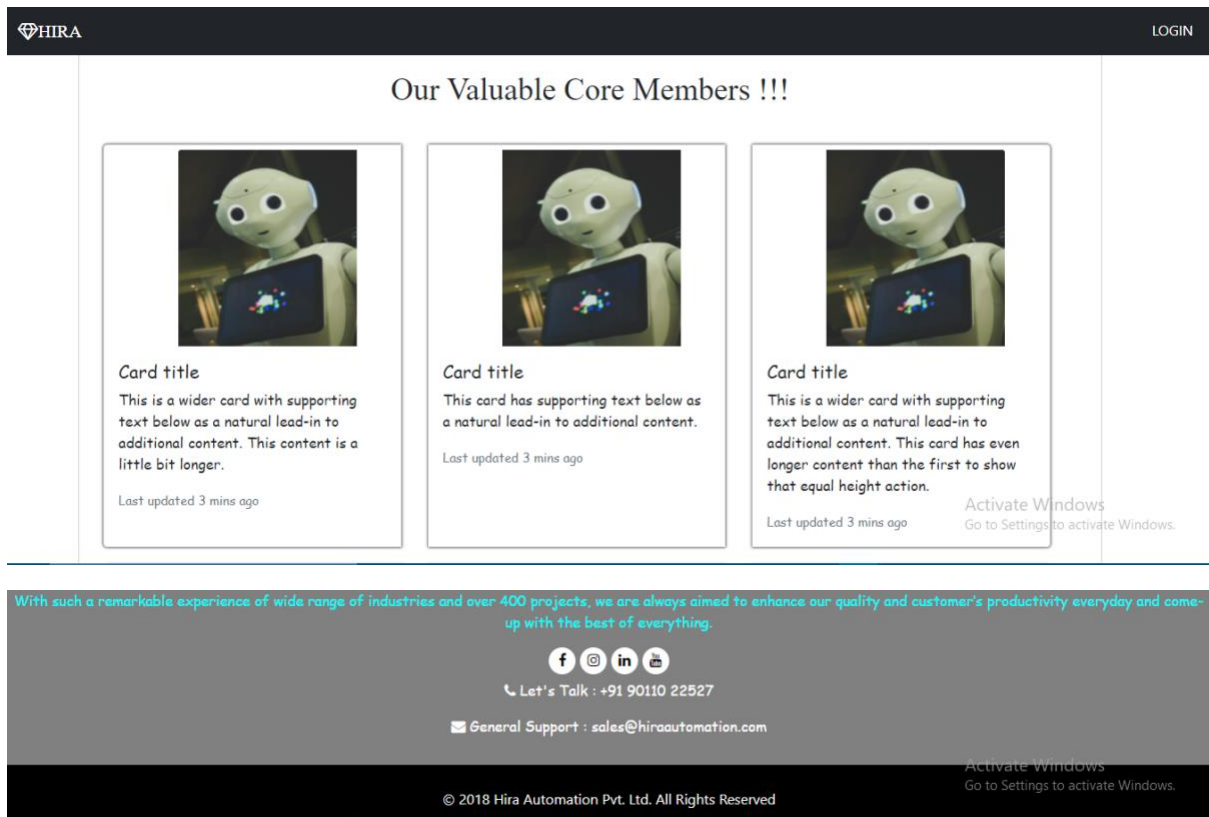

The login page is where the employee gets logged into his/her account by submitting Username, Password as shown in fig.2. It is ***mandatory for every person to login.***

**Fig. 3. 1 Home Page**

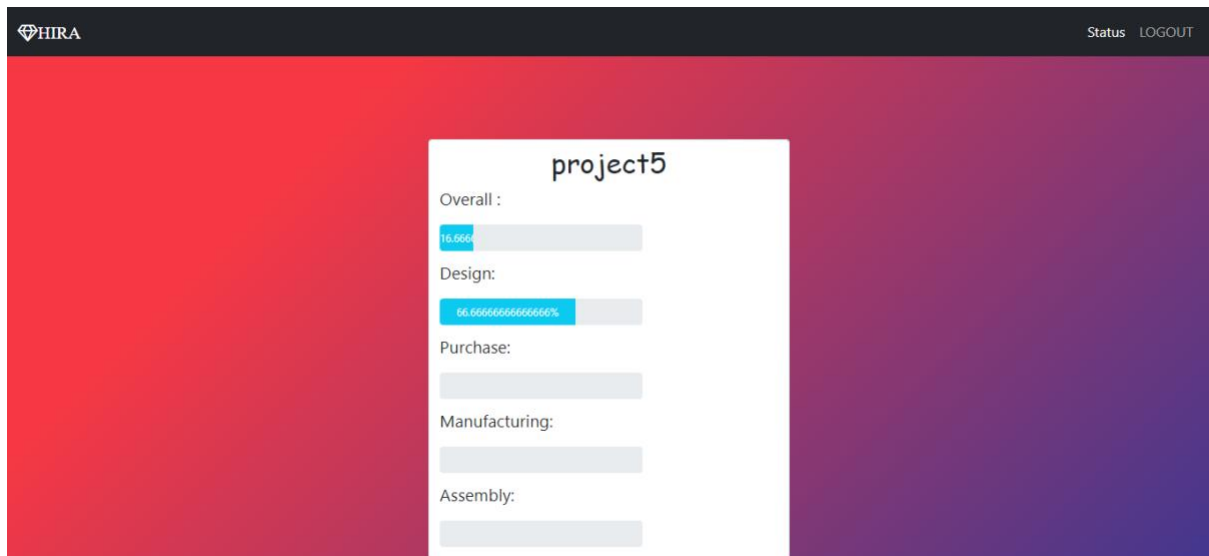

**Fig. 3. 2 Home Page**

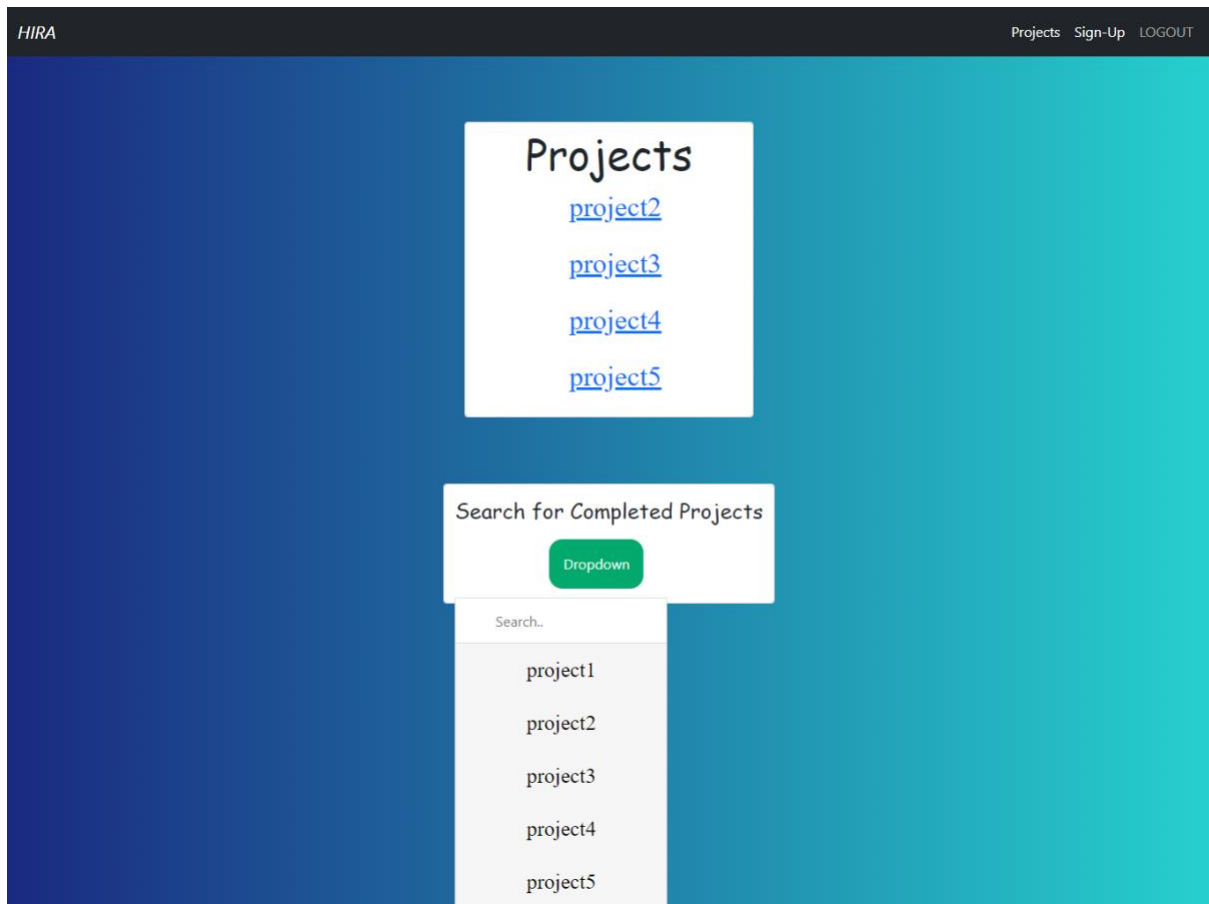

**Fig. 3. 3 Home Page**

This page is *common* for *all* the *users* whether it may be an engineer, manager or a customer. Whenever a person *visits* the *site* he / she will be *redirected* to the *home page* of the website. The home page will *contain* the *information about the company* and the *board of directors* of the company. All *achievements* and *completion of big projects* will be revealed on screen.

**Fig. 4 Customer Page**

The Customer Page displays the detailed progress of their project, which includes the total completion of the project, department wise completion of the project as a result the customer is able to keep a *live track* for their project.

**Fig. 5.1 Admin Page**

## admin

## DESIGN

**Fig. 5.2 Admin Page**

Only the admin page will have the access to monitor each and every department progress which shows the detailed information for the *on-going as well as the previous completed* project. In the detailed information, the admin will be able to keep a track for projects where he / she will be able to *maintain a record* whether the task of a particular project is being completed on time or not. It will help the admin to decide which department is not completing the task on time and the *overall progress* of the department.

**Fig. 9 Task list with Timeline**

As exhibited in Fig.9 the *table displays* a *list* of tasks assigned to a particular Engineer which shows the *Assign Date* which means when the task was allocated to the Engineer and *Deadline* for a particular task or the date before which the *task* should be *completed*. It gives a brief idea which project's *deadline is approaching*, which *task* should be done on a *priority* basis.

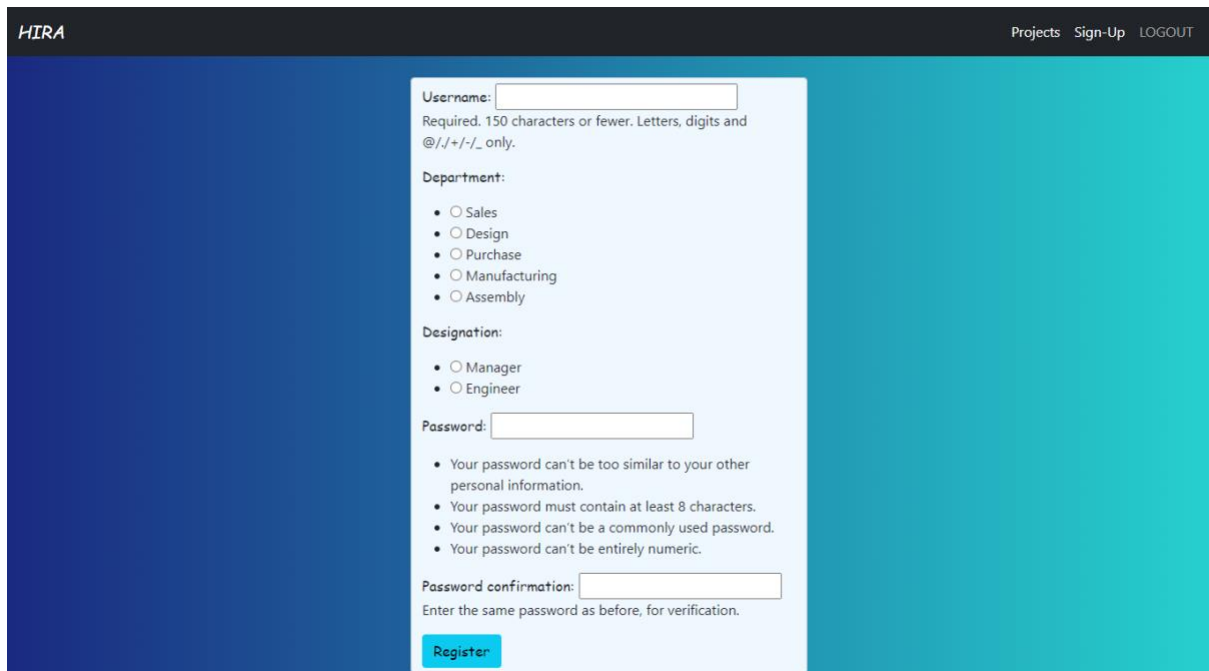

**Fig. 10 Upload Page**

The required document's which engineer needs to submit (Ex : BOC, BOM) he / she can do it by *choosing* the *file*, selecting the *appropriate file format* and *clicking* on the *upload button* as shown in Fig. 10.

HIRA				Tasks	Upload	LOGOUT
Project	Task	Deadline	Complete			
project4	Analysis	Aug. 10, 2021, 2 p.m.	<input type="checkbox"/>			
project4	Release	Aug. 11, 2021, 2 p.m.	<input type="checkbox"/>			
project5	Release	Aug. 12, 2021, 2 p.m.	<input type="checkbox"/>			
				Submit		
				Activate Windows Go to Settings to activate Windows.		

**Fig. 11 Engineer Page**

As demonstrated in Fig. 11, the table displays the tasks allocated to him/her with a timeline and he/she needs to *click the checkbox in the complete column* as soon as the *task is completed* and then hit the *submit* button. For the engineer an *upload button* is provided in the navigation bar to *submit the required documents* which include BOC, BOM and Drawing.

The image shows a web application interface for signing up. At the top, a dark blue header contains the text "HIRA" on the left and "Projects Sign-Up LOGOUT" on the right. The main content area has a light blue background. A white form box is centered, containing the following fields and instructions: "Username:" with a text input field and a note "Required. 150 characters or fewer. Letters, digits and @/./+/-/\_ only."; "Department:" with five radio button options: Sales, Design, Purchase, Manufacturing, and Assembly; "Designation:" with two radio button options: Manager and Engineer; "Password:" with a text input field and four bullet points: "Your password can't be too similar to your other personal information.", "Your password must contain at least 8 characters.", "Your password can't be a commonly used password.", and "Your password can't be entirely numeric."; and "Password confirmation:" with a text input field and the instruction "Enter the same password as before, for verification.". A blue "Register" button is at the bottom of the form box.

**Fig. 12 Sign Up**

If a ***new member*** has to be added to the team he / she should sign up by giving his / her username, password which should be remembered, his department and designation in the team as presented in Fig. 12. After a successful sign up his ***details*** are ***stored*** in the database so that in ***future*** he can use the required details to ***login*** on the website.

## Fig. 13 Document Page

The Document Page displays mainly **BOC or BOM** visible only to the purchase and manufacturing team. If the **purchasing team logins** they are able to see the **BOC sheet**, if the **manufacturing team** logins they will be able to see the **BOM sheet**. Only the **engineers** from the purchase and manufacturing team are able to tick the **checkbox** given as **ticking the checkbox** will convey the message the particular **task is completed**.

## 6. Future Scope:

We can *update* the model so that we are able to find the *department efficiency*, how effectively the department is *completing* the given task. We can improve the model further ahead so that *each individual engineer's efficiency* can be predicted based on his / her *previous* working *information*.

*Further* we can make a *one step model* which will only include the *scanning* of a *bar code* and all the required *information* is *passed* on to the *database* which *helps* in *making* the required *calculations* and giving the required *result*.

In the *current model* when the task is completed the respective *engineer needs* to *click* on the *check box* and then *hit* the *submit* button so that further data processing will take place which is a *bit of a time* consuming process for the engineer. Instead we can put in a *Barcode* where the *engineer simply* needs to *scan* the *barcode* with his already *existing smartphone* and the *data* is *transferred* to the *database*.

## 7. Problem faced during project execution:

At *first*, we implemented this *project* using *PHP* technology. Using PHP we implemented the *first phase* of the project and *hosted* it to *gather data*. During this we were *new* to *PHP*, hence we needed to learn the language and it's usage. During the *second phase* of the project, due to *dynamic file handling* we *shifted* the project from *PHP to the Django framework in Python*.

While *working* in *Django*, as the *raw file was uploaded*, we were required to *update* its *content* as per the completion of respective tasks which required thorough knowledge about in-depth Django with Python libraries and HTML.

Also, during the month of May, due to a medical emergency, the project was interrupted for almost a month as the work was divided among two of us as backend and frontend.

20	Final Report Discussion with Project Guide	04 / 09 / 2021 10:00 am to 11:30 am

## 10. Project Exposure:

In the *non-technical domain*, we learned a great deal about presentation, accepting feedback and suggestion, communication skills, and improved team skill. It gave a boost to creative thinking while deciding the appearance of the web page.

Also, we got to learn about various processes and departments in an Industry. Understanding about their workflow in Second Year itself was beneficial for us.
